

# TRANSPORTATION

## – policy and finance

What are we looking at in terms of legislation, policy and economic conditions for roads, streets and railways?

# #1: More strict environmental legislation

Stricter environmental legislation at various levels is driving development and construction opportunities, including through increased costs and new technology choices. Increased electrification and changes to tax and charging rules are some ways forward.

## #2: Increased collaboration

Knowledge and capacity building, Increased co-operation between municipalities and the creation of larger organizations to provide opportunities to address long-term issues.

## #3: Climate change adaptation

Climate change poses risks to our water supply. Meeting the future requires good decision-making, prioritisation and interdisciplinary research - then the challenges can drive new innovative solutions.
